
Case Study
Leading UK ready meal processing plant

"I am very pleased the trial has run well and you have saved us money... I would be happy for you to have a meeting with another site now."

Chief Engineer

Typical storage before System8®

Storage after System8®

Storage after System8®

The problem

Existing Lubricant Storage Situation

The site stored 22 products from 6 different manufacturers, with a challenging storage and stock control system.

Potential risks

- High risk of contamination of food by mis-application
- Product recall from mineral oil contamination
- Non-compliance in audit situations
- Inadequate system of control and dispensing
- Out of stock situations causing plant stoppage and downtime
- Frustration and stress from above risks
- Indirect dealing with manufacturer causing delays and inadequate application knowledge

The solution

Introduction of System8®

A System8® free eight week trial was concluded very successfully on site, saving the customer up to 40% on competitive and superior performance foodgrade products.

The benefits

Compliance

Guaranteed audit compliance to the BRC Global Standard for Food Safety bringing total peace of mind. Elimination of risks and prevention of non-conformances and product recall from incidents relating to industrial lubricants/mineral oil contamination.

Simplicity

Rationalisation of inventory from 22 lubricants to 14 specialist products. Rationalisation of manufacturers from 6 to 1. A system of control, providing colour coding and a dispensing system, enabling accurate selection of correct lubricant.

Performance and service

Reduction of breakdowns and extension of equipment life through application of high performance synthetic technology and application expertise. Free next day delivery on all products and real time technical support, by email, phone or site visit.
